

STEELMATE

Automotive

Make: Ford
Model: Connect
Year: 2006
Kit Type: Rear

Technical Information

Adaptor rings must be used on this vehicle so 25mm holes must be drilled for the adaptor rings. The sensors are located in the metal part of the bumper 2cm down from the plastic moulding at the top. A & D sensors are 20cm in from the wheel arch making the distance between A & D sensor 131.4cm. The distance between A & B, B & C and C & D sensors is 43.8cm. Connect sensors to cables in their usual sequence and cable tie them behind the bumper. There is a grommet for the sensor cable entry into vehicle on the near side. The control box can be positioned behind the back light so it cannot be seen inside the rear of the vehicle. The power connections for the control box can all be taken from the rear light. Green with orange trace is 12V+ Reverse and black is 0V ground.
