

STEELMATE

Automotive

Make: Nissan
Model: 350Z
Year: 2003
Kit Type: Rear

Technical Information

A and D sensors should be mounted at 53.5cm from the ground and directly below the indicator bulb which can be seen through the clear indicator lens.

B and C sensors should be mounted at 57cm from the ground and 12 cm from reverse / fog light.

The installation can be carried out without the need to remove the bumper.

The ground goes on the bolt as illustrated in picture Reverse light wire is light green with silver mark. This is found behind the back panel trim as picture shows.

The wiring from the sensors to the control box enter the vehicle through a grommet located in the centre of the back panel.

The control box is best located in the top left hand corner of the spare wheel compartment, as picture shows.
