

STEELMATE

Automotive

Make: Suzuki
Model: Jimny
Year: 2005
Kit Type: Rear

Technical Information

A and D sensors should be mounted at 66cm from the ground and directly below the rear light clusters as shown in picture.

B and C sensors should be mounted at 59.5cm from the ground on the two plastic overriders either side of the spare wheel as shown in picture.

The installation can be carried out without the need to remove the bumper.

The +12V reverse light wire is red and can be found in the near side front footwell of the vehicle under the carpet in main loom. The ground can be connected locally to control unit.

The wiring from the sensors to the control box enter the vehicle through a grommet located in the centre of the back panel.

The control box is best located on the back panel right behind the jack to the left of the cable entry grommet.
