

STEELMATE

Automotive

Make: Citroen
Model: CI
Year: 2005
Kit Type: Rear

Technical Information

Firstly you need to mark the holes for the sensors we found these to be approx 57.5cm up from the ground. A & D sensor are approx 132.5cm apart meaning that when a four sensor kit is fitted the distance between A, B, C & D sensors should be approx 44.2cm apart.

Grommet Location

Control Box Location

Cable entry for the sensor cables into the car is through a grommet located in the back panel of the car on the passenger side.

The reverse wire can be found on the passenger side of the vehicle at the back in the loom that goes up to the rear light it is red. The ground can be taken from a bolt on the rear panel holding the main loom.

As this particular car was having a front and rear kit fitted a display had to be installed.
